

Colorfront On-Set Dailies

Operator's Training Course

Introduction

Colorfront On-Set Dailies is a powerful tool for creating dailies or other file-based deliverables from digital production sources such as Sony F65, Arri Alexa, Red Epic, Phantom and Canon C300. The software allows experienced operators to apply LUTs & CDLs, create custom grades, sync audio, manage metadata, and render multiple deliverables simultaneously.

Since its introduction just over a year ago, On-Set Dailies has already been adopted by major post production facilities, studios and producers across North America and Europe - where it is being used on major motion pictures and television programs.

Course Synopsis

With a focus on producing dailies under real-world circumstances, this one and a half day course will help Students learn basic through intermediate operation and features of On-Set Dailies. In addition, Students will be taken through the typical series of steps for configuring projects, loading data, creating dailies reports, and verifying rendered deliverables.

Prerequisites

On-Set Dailies encompasses functions which in some post production environments were previously shared between data management operators, Colorists using software color correction systems, non-linear editing support technicians, and file-based encoding operators. Some knowledge combination within these areas, as well as general familiarity with high end digital cinematography capture systems is recommended.

Course Structure

Day 1: 9:30 am - 4:30 pm

Day 2: 9:30 am - 1:30 pm

Day one consists of detailed hands-on instruction and culminates with each student running through a dailies session at "half speed" - allowing time to revisit the day's topics as necessary.

Day two is designed to simulate a real world dailies scenario - with raw media coming from "production," and the goal of creating a defined set of dailies deliverables with minimal instructor interaction.

Schedule & Registration

Check our website at creativescience.com for current schedule and registration information.

Cost: \$495

Length: 10 hours

Location: 14945 Ventura Blvd, Ste 228

Sherman Oaks, CA 91403
